

Successful Internoise 2023

1100 acousticians gathered in Japan

August 28th, 2022 - Copenhagen, Denmark

DMdB's founder and director, Douglas Manvell, has just returned from [Internoise 2023](#) where over 1100 attendees from over 40 countries gathered in Chiba in Greater Tokyo, and another 100 participated online. And with over 800 papers and 30 exhibitors to choose from, the conference's 3 days were full of opportunity to learn, discuss and network with the leading practitioners and researchers in noise control, particularly with those from North East Asia. With all presentations recorded and available to attendees, the value of attending Internoise is further increased, enabling participants to listen and learn from many more papers. Once again, it was great to meet people face to face to further strengthen and develop one's network as well as one's knowledge.

As Douglas summarizes, *"the session I organized with Yoshihiro Shirahashi of Kanagawa University on Smart Cities and Noise Monitoring was very successful and well-attended, covering a wide variety of topics such as urban planning; source identification through AI signal recognition and multisensor direction identification, including some very innovative techniques; use of MEMs sensors; as well as more traditional noise monitoring. My paper on the revision of ISO 1996-1 standard on the assessment of environmental noise provided much-needed awareness of this work. As usual, some very enjoyable days being totally immersed in noise control around the world – thanks to all involved."*

Internoise is a series of conferences traditionally hosted cyclically in different geographical regions. Next year, [Internoise 2024](#) will be held in Nantes, France on 25-29 August. And then it will be in Sao Paulo, Brazil in 2025, and I hope to see you in one or both places.

For more information about Internoise 2023, see [here](#). For more information about environmental noise standards including the revision of ISO 1996-1, or the services DMdB can provide, contact DMdB:
