

JARI Road Noise Conference

Presenting recent and current activities concerning environmental noise in Europe and UK

March 2nd, 2022 - Copenhagen, Denmark

On 13th January, JARI, the Japanese national automobile research institute, held their 2nd Road Noise Conference. And DMdB contributed with a presentation providing some insight into recent and current activities concerning environmental noise in Europe and UK.

Douglas Manvell states *“I have had a long and fruitful working relationship with leading Japanese researchers in environmental noise and road noise in particular. So, when I had the opportunity to assist JARI with insight into environmental noise in Europe and UK, I happily agreed. This helps Japanese industry in understanding the European situation and requirements to road vehicles.”*

Topics covered included how the latest WHO noise guidelines are expected to impact Europe, and the current status and news concerning the EU environmental noise directive. In addition, a range of newly published research and developments concerning environmental noise in EU and UK were described.

JARI was established in 1969 with the mission of contributing to the sound development of the automobile society, and is engaged in neutral and public interest activities, contributing to the development of the Japanese automobile industry and the development of automobile technology.

For information about the Japanese Automobile Research Institute, see <https://www.jari.or.jp/>.
